

Some Selected Photos made during the Spring School 05, Berkeley

Kyrill Bugaev

*Lawrence Berkeley National Laboratory
Nuclear Science Division*

Ask your-self who will stay in the class-room during such a weather?

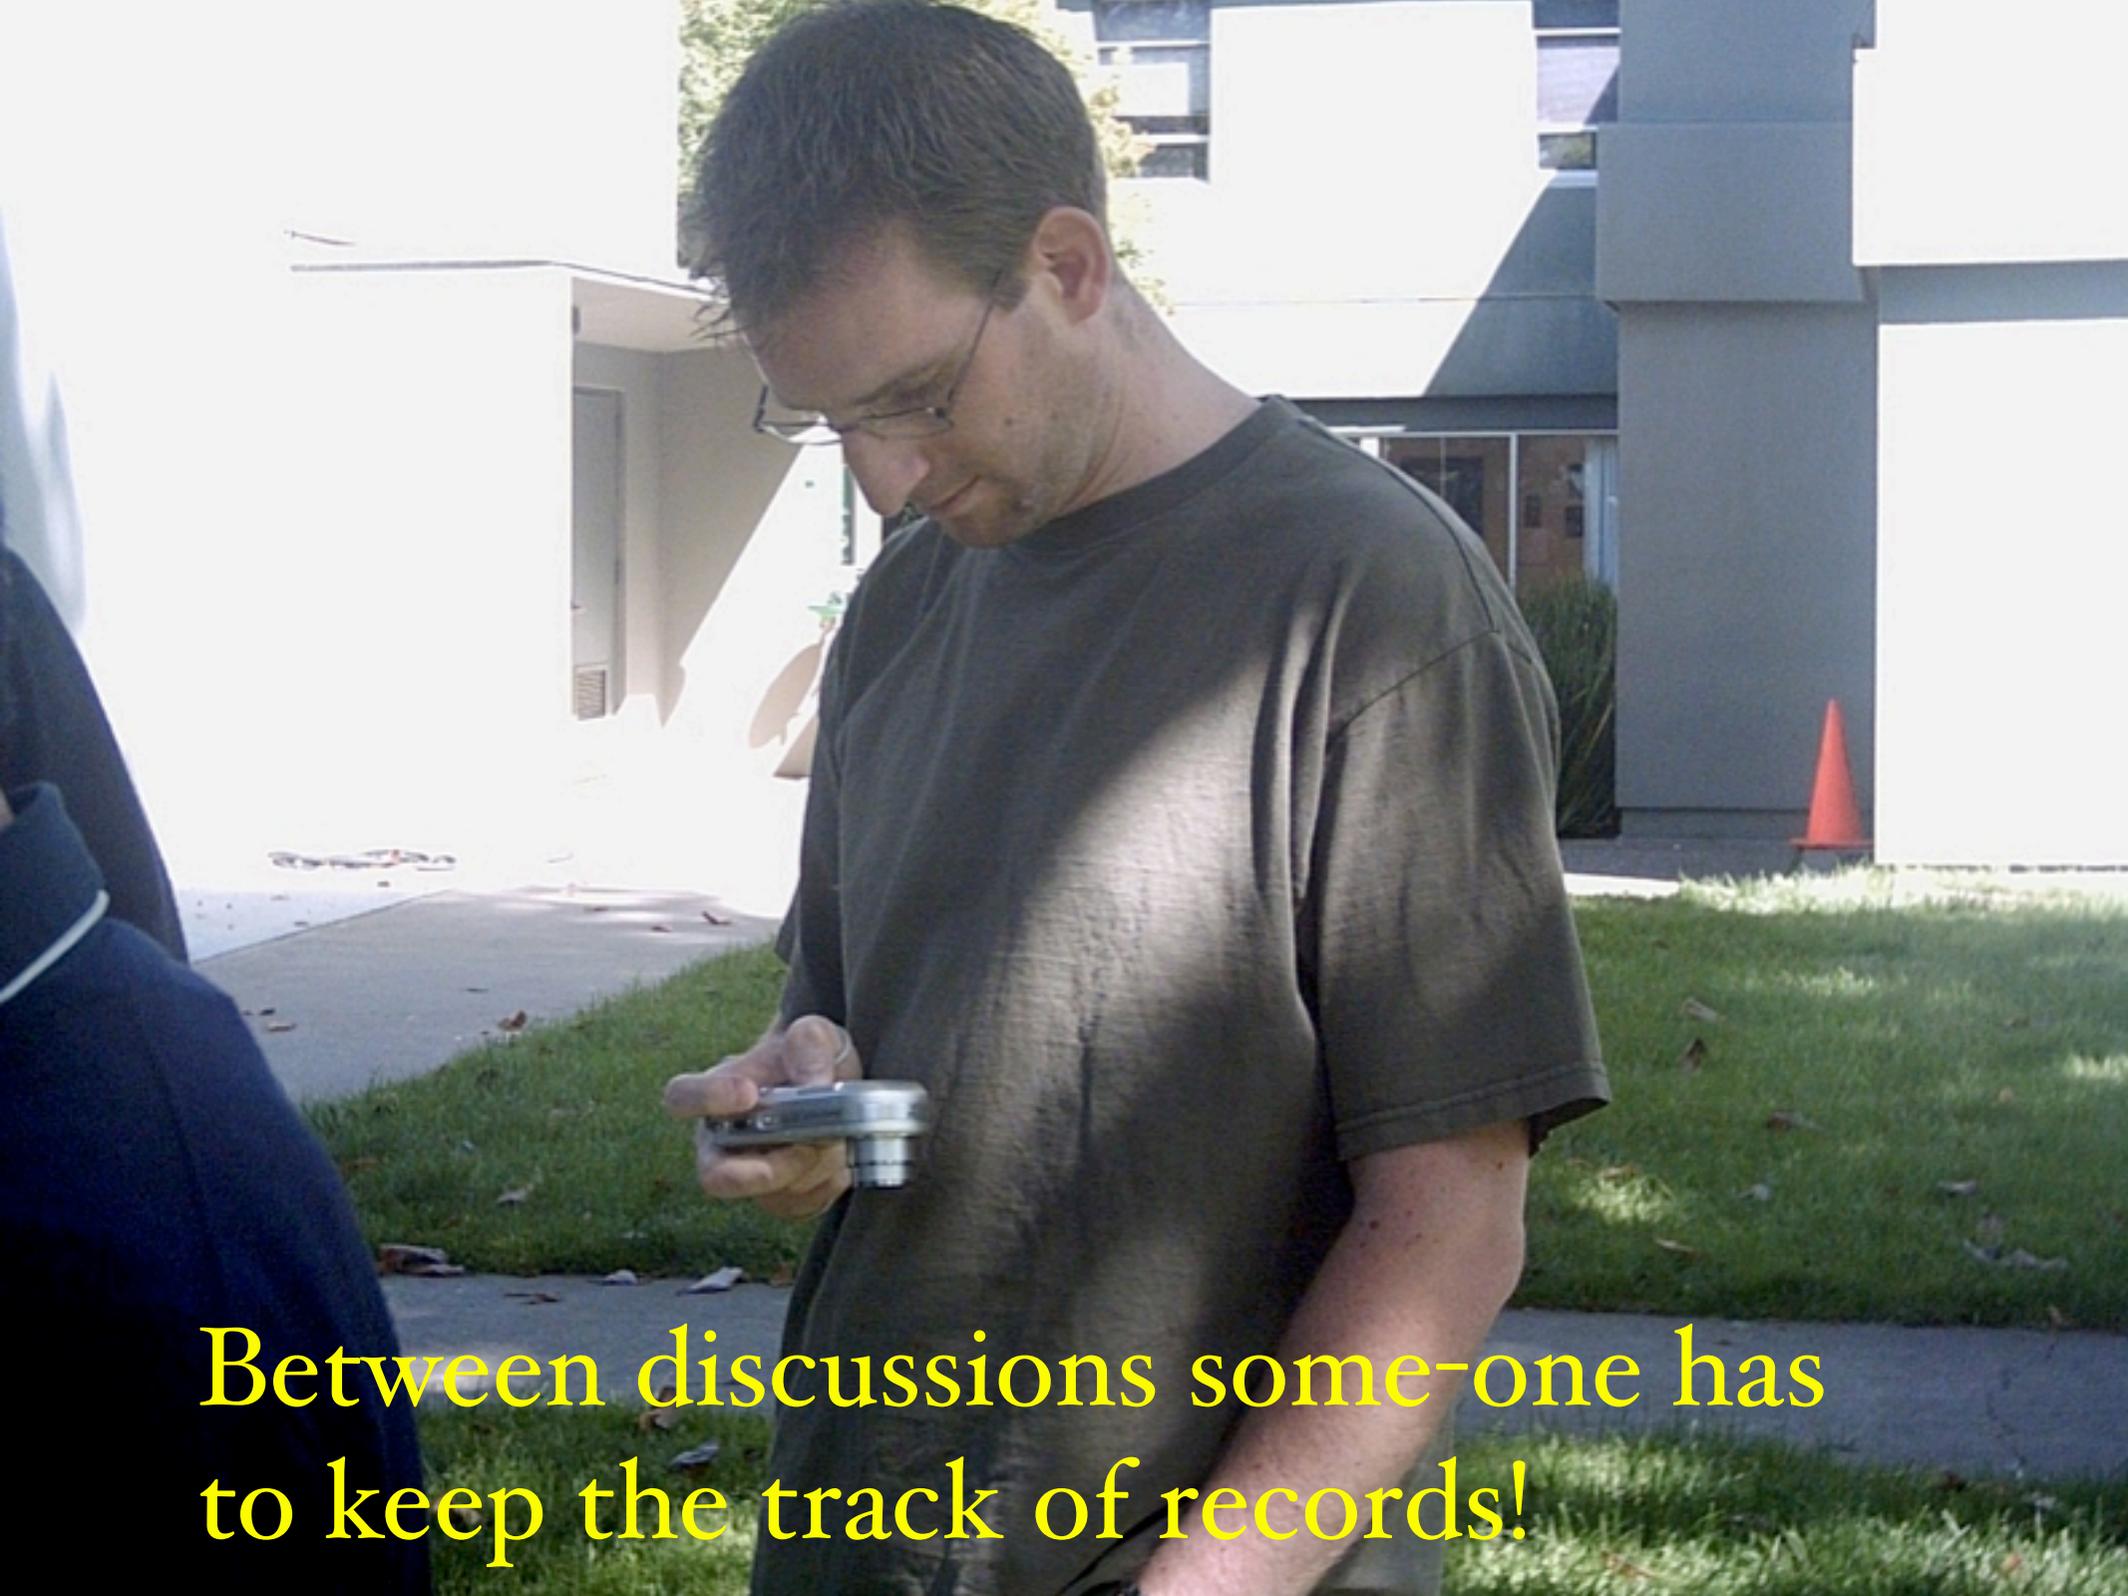

Management is never easy, but they do it pretty well! For a proof see next slides...

**Look what the organizers
can do for the guests!**

Such tricks you don't see in a Circus!

Between discussions some-one has to keep the track of records!

Some are discussing and some are...

And some are observing

Then the roles
are changed!

Trust me it is not easy to combine a scientific discussion with sport exercises!

Russian Mafia: they are clever,
intelligent and strong!

If you think Markus is doing a coordination test, then you are wrong! He can describe the quark interaction in UrQMD with his closed eyes!

That is a real discussion!!!

You think he is giving a last warning?
No, he points at the hole in arguments!

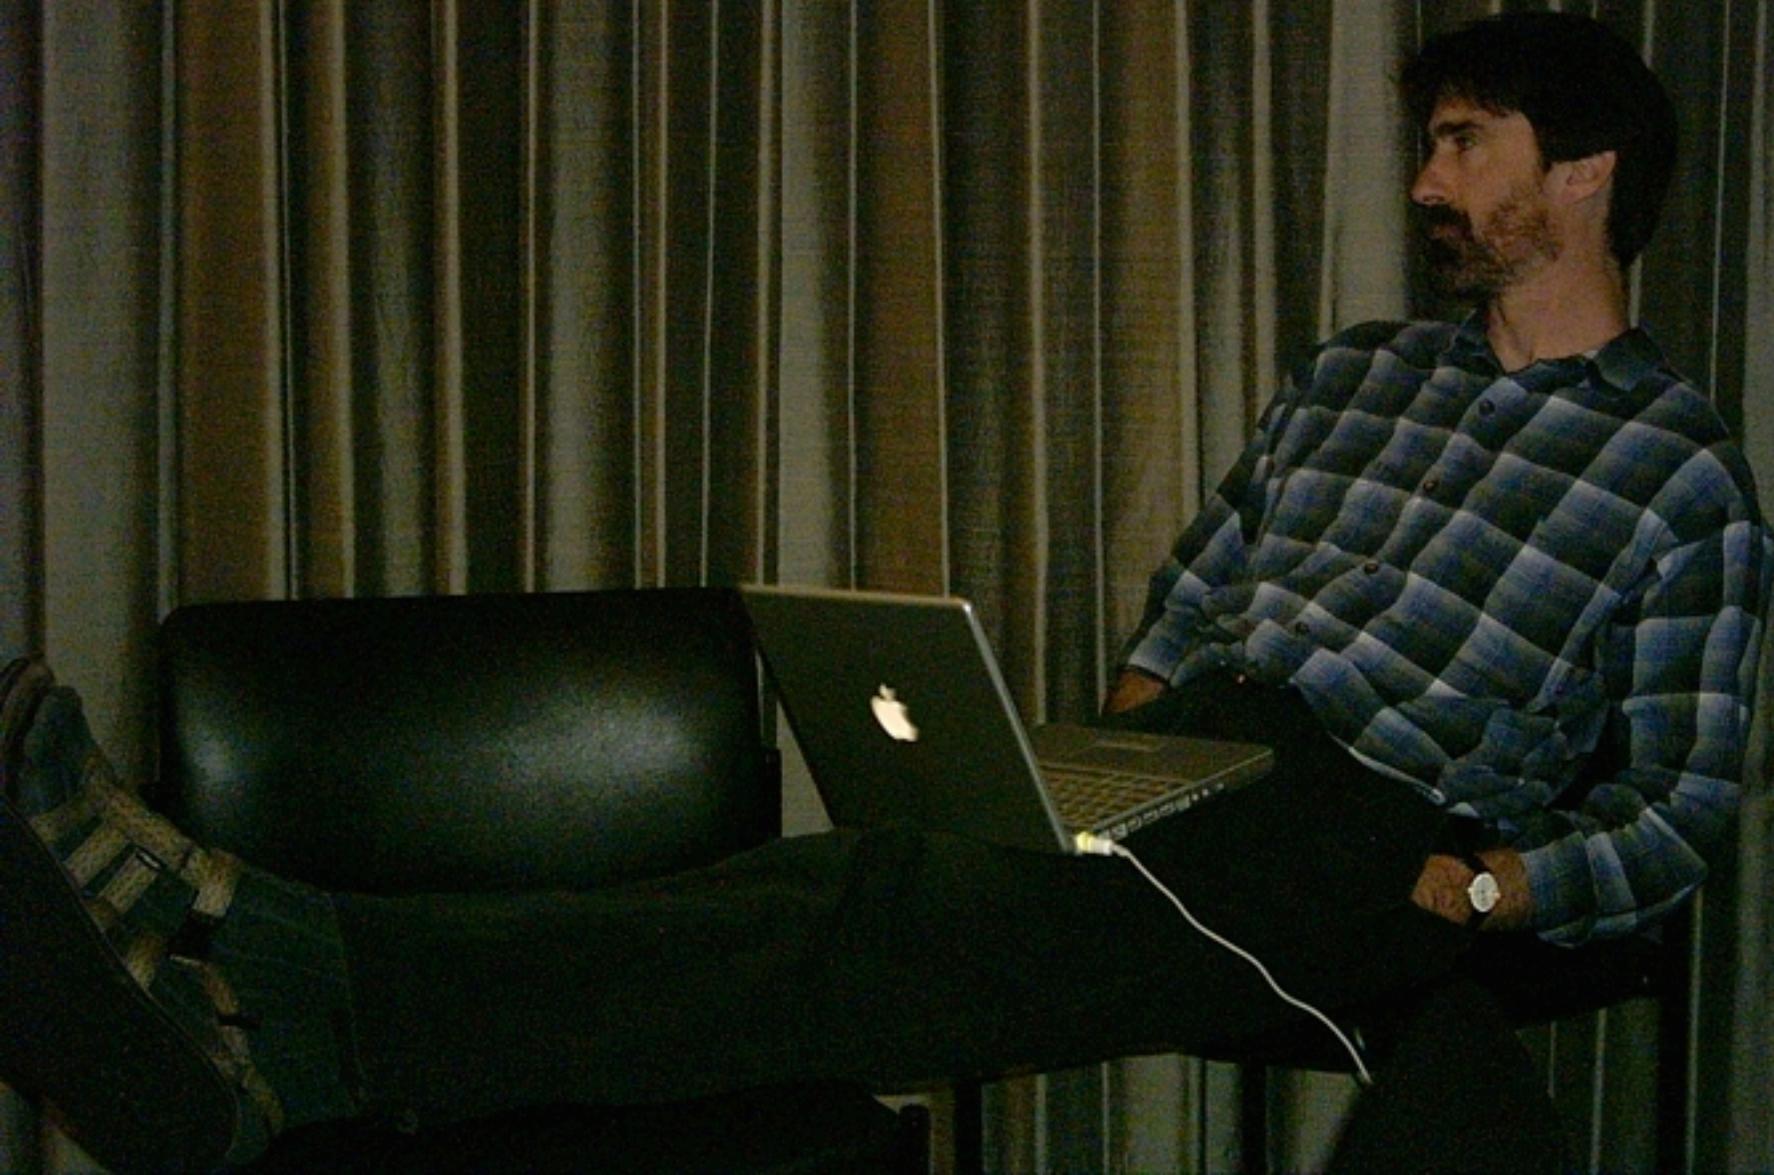

Cheers, Volker!

No one can be sure what is in Nu's mind!

Mike is skillful in invisibility as well!

Chemical freeze-out or not?

Divination on a coffee is extremely difficult!
Even Edward needs an inspiration for that!

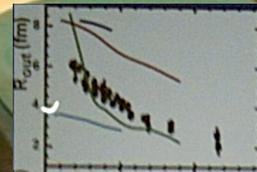

I do hope that there is a wine in those bottles and not a famous Nu's liquid to clean the car windows!

Understanding
Physics with Real Life
Examples

If you can imagine this plate full of 2
particle correlations, then it is easy to get
why the Blast Wave works!

At the Beginning of the Collision we
have just Cold Matter

Then Multiple Scattering occur...

Then a highly excited (partonic?)
matter is created!

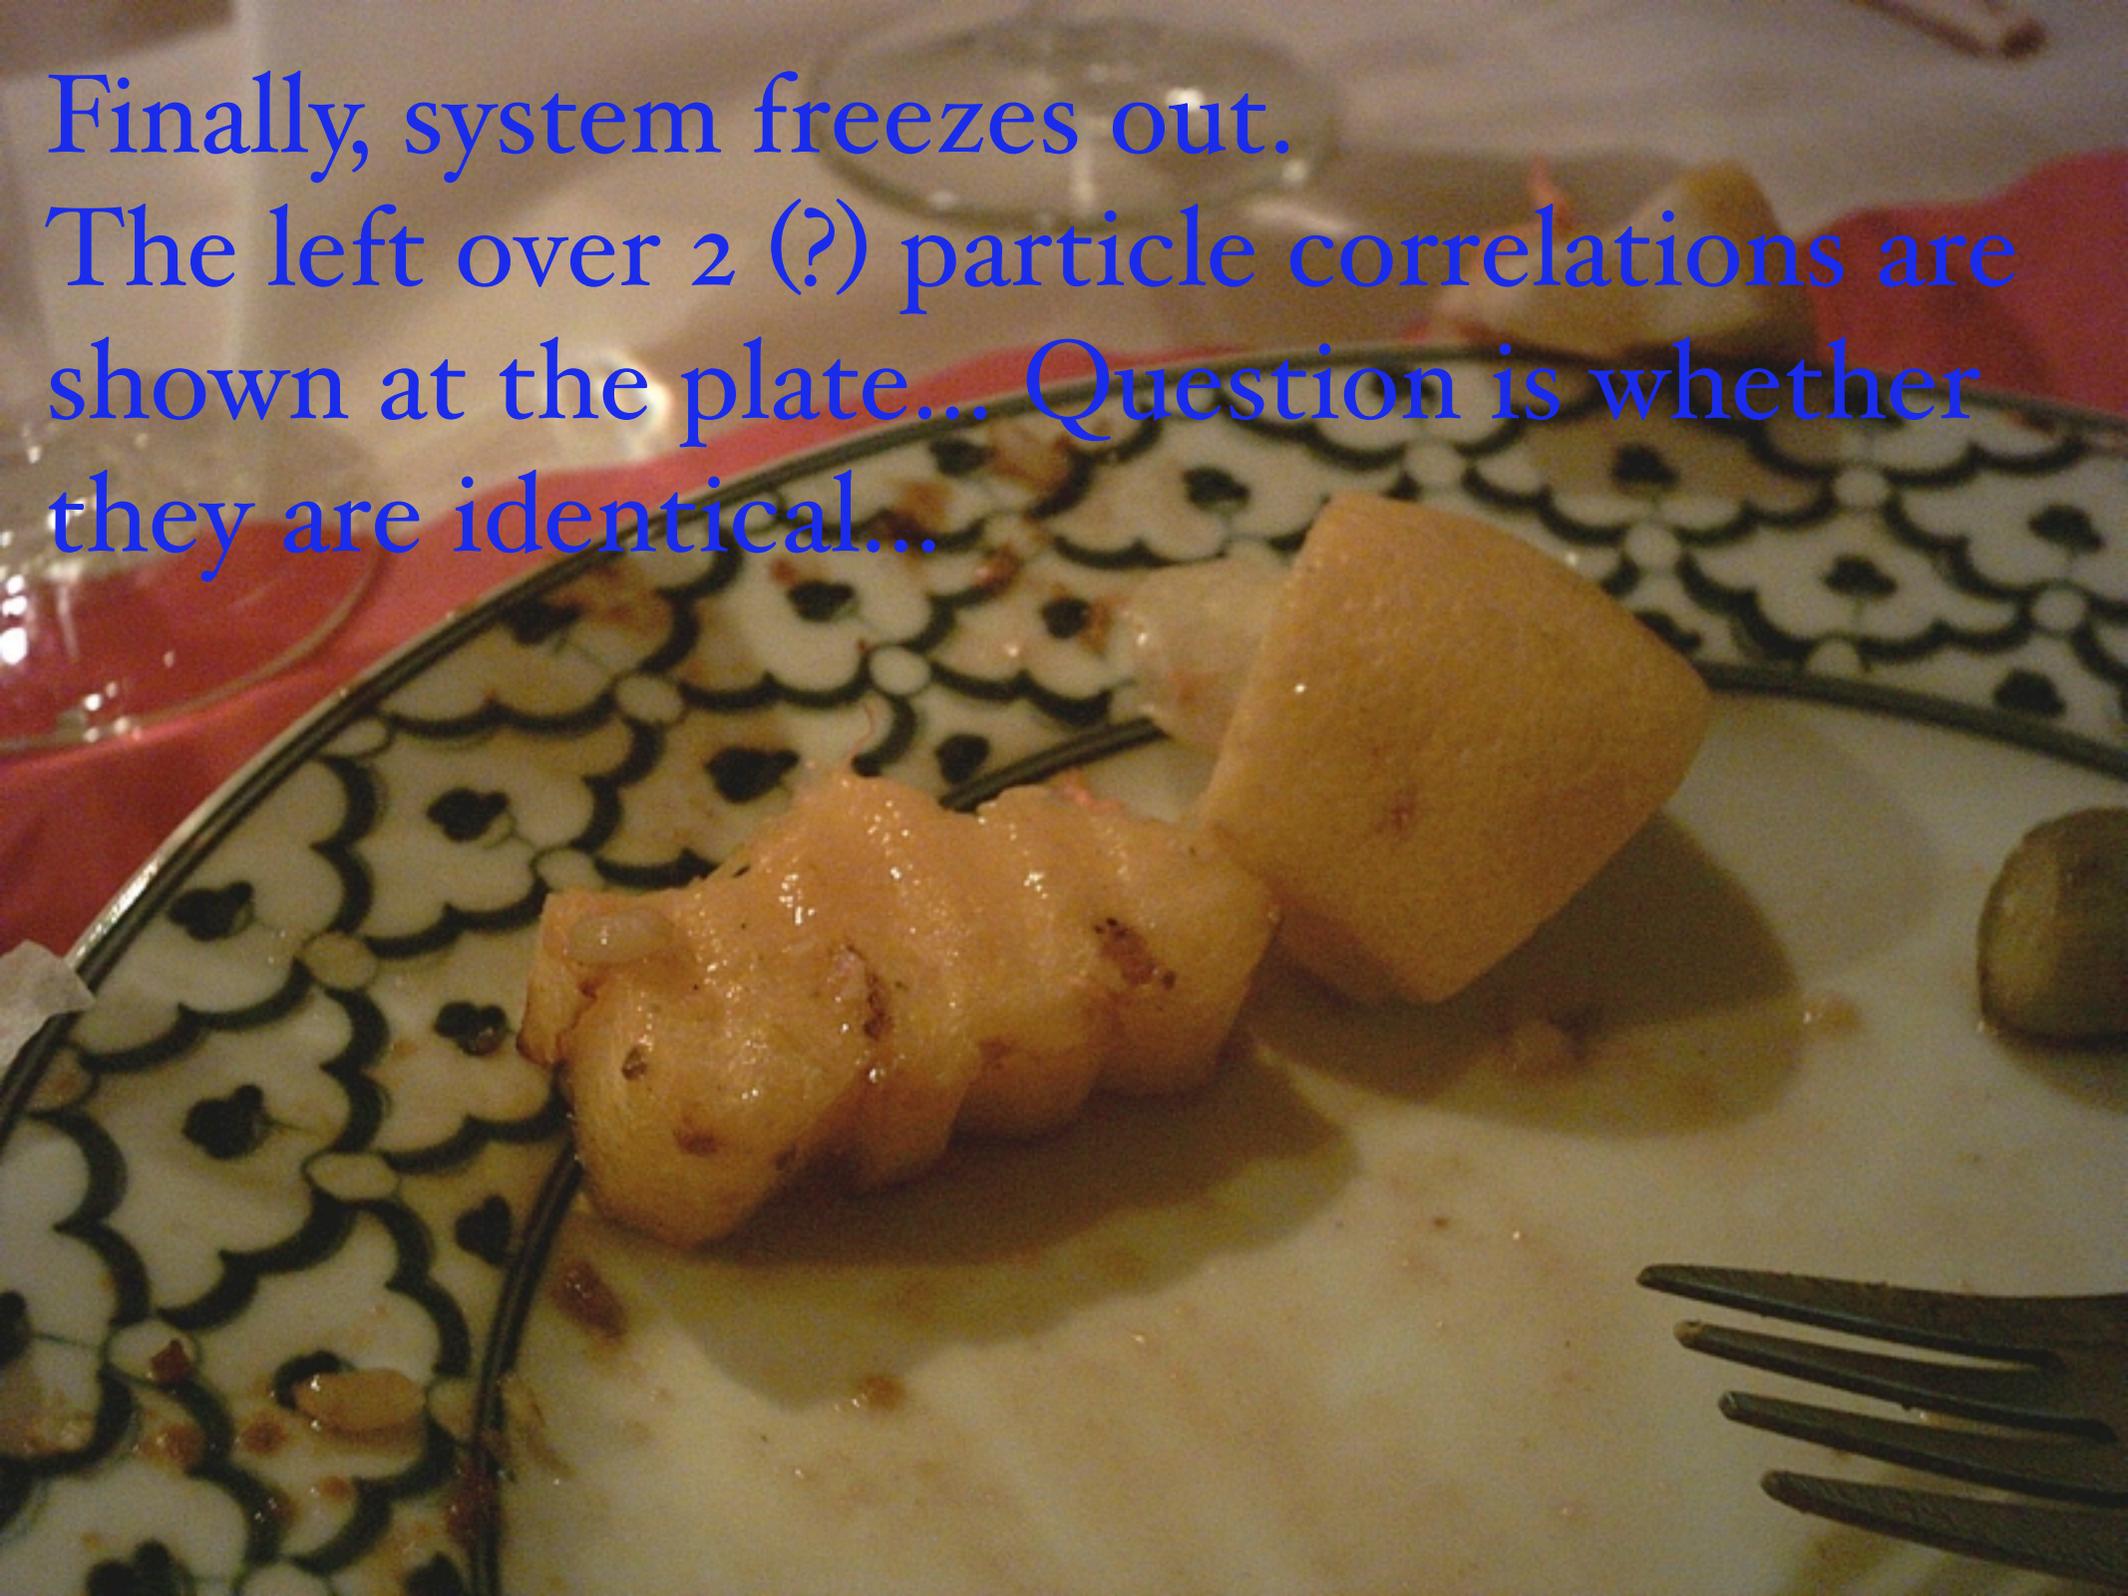

Then system expands and cools down...

- Left: Evidence for the Lorentz-Nu Contracted state

Finally, system freezes out.

The left over 2 (?) particle correlations are shown at the plate... Question is whether they are identical...

An Example on how the Uncertainty Principle works: in the first measurement the left guy closed his eyes.

In the second measurement the right guy closed his eyes. Consequently, it is impossible to find out for sure who is more drunk: I, Nu or photographer!
